# Did you Learn Something New?

① Start presenting to display the poll results on this slide.

# Intro to ML

UTMIST Study Group - Module 1

# Topics

- Linear regression & classification
- Loss functions
- Activation functions
- Gradient descent
- Overfitting & regularization

slido

# Linear Regression & Classification Examples

① Start presenting to display the poll results on this slide.

# Linear Regression vs Classification

Classification

Regression

# Activation Functions

- How are activation functions useful?
- Difference between linear and non-linear activation functions?
- Various types and their uses?

slido

# Different Types of Loss Functions

① Start presenting to display the poll results on this slide.

# Loss Functions

## Mean Squared Error (MSE) Loss

- Regression loss
- Average of squared difference
- Penalize wrong predictions that were further away

$$MSE = \frac{\sum_{i=1}^n (y_i - \hat{y}_i)^2}{n}$$

## Cross Entropy Loss

- Classification loss
- Penalize wrong predictions that were confident

$$CrossEntropyLoss = -(y_i \log(\hat{y}_i) + (1 - y_i) \log(1 - \hat{y}_i))$$

# Optimization Algorithms

In breakout room groups, try to recall these terms:

- Optimization algorithm
- Gradient
- Gradient descent
- Learning rate
- Stochastic gradient descent

# Optimization Algorithms

- Optimization algorithm: function's min/max
- Gradient: direction of steepest ascent
- Gradient descent: first-order (first derivative) optimization algorithm
- Learning rate: size of step in each iteration
- Stochastic gradient descent: randomly select data point to represent

# Gradient Descent

# Regularization

- Discourage learning complex model
- Avoid overfitting

# Regularization Techniques

- Weight Penalty: prevent large weights
- Data augmentation
- Dropout: drop nodes
- More data!

# Thank You!

We welcome any questions/feedback.
